

FortiGate®/FortiWiFi™-80 Series

Enterprise-Class Protection for Branch Offices

Proven Security for Remote Offices, Retail, and Customer Premise Equipment

FortiGate/FortiWiFi-80 Series consolidated security appliances deliver comprehensive enterprise-class protection for remote locations, branch offices, customer premise equipment (CPE) and retail networks. FortiGate/FortiWiFi-80 Series platforms feature an integrated set of essential security technologies in a single device to protect all of your applications and data. Simple per-device pricing, an integrated management console, and remote management capabilities significantly reduce costs associated with deployment and management.

Comprehensive Protection

Fortinet's market-leading security technology and research results in appliances providing unmatched protection against today's sophisticated multi-vector threats. FortiGate/FortiWiFi consolidated security platforms integrate firewall, IPSec and SSL VPN, antivirus, antispam, intrusion prevention, web filtering and vulnerability management into a single device at a single price. They also provide data loss prevention (DLP), application control, and endpoint NAC.

The FortiGate/FortiWiFi-80 Series specifically addresses many policy enforcement requirements included in government and industry regulations, such as the PCI Data Security Standard. They also ease migration to new industry standards such as IPv6, supporting dynamic routing for both IPv4 and IPv6 networks. Fortinet's Global Threat Research Team and ICSA Labs-certified inspection engines ensure the best possible protection in your network.

DATASHEET

Primary Features & Benefits

Enterprise-grade protection for smaller networks

- Enables deployment of Fortinet's unmatched protection and performance in smaller environments

Redundant connectivity methods

- Dual 10/100/1000 Ethernet, analog modem (FG/FWF-80CM models) and optional 3G wireless offer redundant WAN connections to ensure availability of data

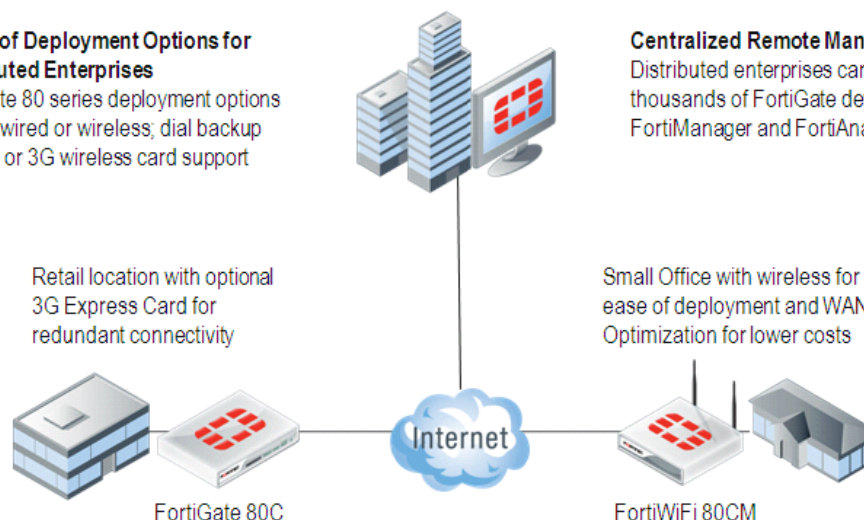

Centralized Management

- FortiManager and FortiAnalyzer centralized management and reporting appliances simplify the deployment, monitoring, and maintenance of the security infrastructure

80 Series Deployment Options

Range of Deployment Options for Distributed Enterprises

FortiGate 80 series deployment options include wired or wireless; dial backup modem or 3G wireless card support

Centralized Remote Management

Distributed enterprises can manage thousands of FortiGate devices with FortiManager and FortiAnalyzer

Redundant Connectivity

The FortiGate/FortiWiFi-80 Series platforms offer dual WAN Gigabit Ethernet (10/100/1000) links, for load balancing or redundant ISP connections delivering high availability and scalability to small or home office application. Six Fast Ethernet (10/100) internal security zone or switch ports and one dedicated DMZ port eliminate need for additional networking devices, reducing investment and management burden. An ExpressCard slot allows for optional 3G wireless WAN connectivity such as EV-DO, W-CDMA, HSPA and GPRS, which provides mobile network connectivity for remote deployments or backup data connectivity in the event of a network failure. The FortiGate/FortiWiFi-80CM platforms gives you the additional convenience and reliability of an analog modem.

FortiGate-80C

FortiGate-80CM

Internal Storage

The internal storage standard on the FortiGate/FortiWiFi-80 Series enables local caching of data for policy compliance or WAN optimization. WAN optimization lowers your networking costs and improves your application and network performance by reducing the amount of data transmitted over your WAN.

FortiWiFi-80CM

FortiGuard® Security Subscription Services deliver dynamic, automated updates for Fortinet products. The Fortinet Global Security Research Team creates these updates to ensure up-to-date protection against sophisticated threats. Subscriptions include antivirus, intrusion prevention, web filtering, antispam, vulnerability and compliance management, application control, and database security services.

FortiCare™ Support Services provide global support for all Fortinet products and services. FortiCare support enables your Fortinet products to perform optimally. Support plans start with 8x5 Enhanced Support with return and replace hardware support or 24x7 Comprehensive Support with advanced hardware replacement. Options include Premium Support, Premium RMA, and Professional Services. All hardware products include a 1-year limited hardware warranty and a 90-day limited software warranty.

FortiOS 4.0 Software—Raising The Bar

FortiOS 4.0: Redefining Network Security

FortiOS 4.0 is the software foundation of FortiGate multi-threat security platforms. Developed solely for security, performance, and reliability, it is a purpose-built operating system that leverages the power of FortiASIC processors.

Fortinet's ASIC-Based Advantage

FortiASICs are a family of purpose-built, high performance processors that use an intelligent proprietary content scanning engine and multiple algorithms to accelerate security and network services.

FortiOS Security Services

FIREWALL

ICSA Labs Certified (Corporate Firewall)
NAT, PAT, Transparent (Bridge)
Routing Mode (RIP, OSPF, BGP, Multicast)
Policy-Based NAT
Virtual Domains (NAT/Transparent mode)
VLAN Tagging (802.1Q)
Group-Based Authentication & Scheduling
SIP/H.323 /SCCP NAT Traversal
WINS Support
Explicit Proxy Support (Citrix/TS etc.)
VoIP Security (SIP Firewall/RTP Pinholing)
Granular Per-Policy Protection Profiles
Identity/Application-Based Policy
Vulnerability Management
IPv6 Support (NAT/Transparent mode)

VIRTUAL PRIVATE NETWORK (VPN)

ICSA Labs Certified (IPSec)
PPTP, IPSec, and SSL Dedicated Tunnels
SSL-VPN Concentrator (incl. iPhone client support)
DES, 3DES, and AES Encryption Support
SHA-1/MD5 Authentication
PPTP, L2TP, VPN Client Pass Through
Hub and Spoke VPN Support
IKE Certificate Authentication (v1 & v2)
IPSec NAT Traversal
Automatic IPSec Configuration
Dead Peer Detection
RSA SecurID Support
SSL Single Sign-On Bookmarks
SSL Two-Factor Authentication
LDAP Group Authentication (SSL)

NETWORKING/ROUTING

Multiple WAN Link Support
DHCP Client/Server
Policy-Based Routing
Dynamic Routing for IPv4 and IPv6 (RIP, OSPF, BGP, & Multicast for IPv4)
Multi-Zone Support
Route Between Zones
Route Between Virtual LANs (VDOMS)
Multi-Link Aggregation (802.3ad)
IPv6 Support (Firewall, DNS, Transparent Mode, SIP, Dynamic Routing, Admin Access, Management)
VRRP and Link Failure Control
sFlow Client

USER AUTHENTICATION OPTIONS

Local Database
Windows Active Directory (AD) Integration
External RADIUS/LDAP Integration
Xauth over RADIUS for IPSEC VPN
RSA SecurID Support
LDAP Group Support

DATA CENTER OPTIMIZATION

Web Server Caching
TCP Multiplexing
HTTPS Offloading
WCCP Support

ANTIVIRUS / ANTISPYWARE

ICSA Labs Certified (Gateway Antivirus)
Includes Antispyware and Worm Prevention:
HTTP/HTTPS SMTP/SMTPS
POP3/POP3S IMAP/IMAPS
FTP IM Protocols
Flow-Based Antivirus Scanning Mode
Automatic "Push" Content Updates
File Quarantine Support
Databases: Standard, Extended, Extreme, Flow
IPv6 Support

WEB FILTERING

76 Unique Categories
FortiGuard Web Filtering Service Categorizes over 2 Billion Web pages
HTTP/HTTPS Filtering
Web Filtering Time-Based Quota
URL/Keyword/Phrase Block
URL Exempt List
Content Profiles
Blocks Java Applet, Cookies, Active X
MIME Content Header Filtering
IPv6 Support

APPLICATION CONTROL

Identify and Control Over 1800 Applications
Control Popular IM/P2P Apps Regardless of Port/Protocol:
AOL-IM Yahoo MSN KaZaa
ICQ Gnutella BitTorrent MySpace
WinNY Skype eDonkey Facebook

HIGH AVAILABILITY (HA)

Active-Active, Active-Passive
Stateful Failover (FW and VPN)
Device Failure Detection and Notification
Link Status Monitor
Link failover
Server Load Balancing

WAN OPTIMIZATION

Bi-directional / Gateway to Client/Gateway
Integrated Caching and Protocol Optimization
Accelerates CIFS/FTP/MAPI/HTTP/HTTPS/Generic TCP

VIRTUAL DOMAINS (VDOMs)

Separate Firewall/Router Domains
Separate Administrative Domains
Separate VLAN Interfaces
10 VDOM License Std. (more can be added)

WIRELESS CONTROLLER

Unified WiFi and Access Point Management
Automatic Provisioning of APs
On-wire Detection and Blocking of Rogue APs
Virtual APs with Different SSIDs
Multiple Authentication Methods

TRAFFIC SHAPING

Policy-based Traffic Shaping
Application-based and Per-IP Traffic Shaping
Differentiated Services (DiffServ) Support
Guarantee/Max/Priority Bandwidth
Shaping via Accounting, Traffic Quotas

INTRUSION PREVENTION SYSTEM (IPS)

ICSA Labs Certified (NIPS)
Protection From Over 3000 Threats
Protocol Anomaly Support
Custom Signature Support
Automatic Attack Database Update
IPv6 Support

DATA LOSS PREVENTION (DLP)

Identification and Control Over Sensitive Data in Motion
Built-in Pattern Database
RegEx-based Matching Engine for Customized Patterns
Configurable Actions (block/log)
Supports IM, HTTP/HTTPS, and More
Many Popular File Types Supported
International Character Sets Supported

ANTISPAM

Support for SMTP/SMTPS, POP3/POP3S, IMAP/IMAPS
Real-Time Blacklist/Open Relay Database Server
MIME Header Check
Keyword/Phrase Filtering
IP Address Blacklist/Exempt List
Automatic Real-Time Updates From FortiGuard Network

ENDPOINT COMPLIANCE AND CONTROL

Monitor & Control Hosts Running FortiClient Endpoint Security

MANAGEMENT/ADMINISTRATION

Console Interface (RS-232)
WebUI (HTTP/HTTPS)
Telnet / Secure Command Shell (SSH)
Command Line Interface
Role-Based Administration
Multi-language Support: English, Japanese, Korean, Spanish, Chinese (Simplified & Traditional), French
Multiple Administrators and User Levels
Upgrades and Changes via TFTP and WebUI
System Software Rollback
Configurable Password Policy
Optional FortiManager Central Management

LOGGING/MONITORING/VULNERABILITY

Local Event Logging
Log to Remote Syslog/WELF Server
Graphical Real-Time and Historical Monitoring
SNMP Support
Email Notification of Viruses And Attacks
VPN Tunnel Monitor
Optional FortiAnalyzer Logging / Reporting
Optional FortiGuard Analysis and Management Service

Firewall

Fortinet firewall technology delivers industry-leading performance for network and application firewalling including Web 2.0 application policies based on the application identity, up to and beyond 10 Gbps throughput. Our technology identifies traffic patterns and links them to the use of specific applications, such as instant messaging and peer-to-peer applications, permitting application access control. By coupling application intelligence with firewall technology, the FortiGate platform is able to deliver real-time security with integrated application content level inspection, thereby simplifying security deployments.

Firewall	
Feature Highlights	NAT, PAT and Transparent (Bridge) Policy-Based NAT SIP/H.323/SCCP NAT Traversal VLAN Tagging (802.1Q) IPv6 Support
Performance	
Firewall (1518 Byte)	1.9 Gbps
Firewall (512 Byte)	700 Mbps
Firewall (64 Byte)	120 Mbps

Antivirus / Antispyware

Antivirus content inspection technology provides protection against virus, spyware, worms, phishing and other forms of malware being transmitted over the network infrastructure. By intercepting application content in transit, and reassembling the data into user expected content, the FortiGate Antivirus features ensures that malicious threats hidden within legitimate application content is identified and removed from the data stream destined for internal (or external) recipients. The addition of Fortinet's FortiGuard subscription services ensured each FortiGate has access to updated malware signatures, resulting in high level of accuracy and detection capabilities including emerging and newly discovered viruses. ICSA Labs has certified our antivirus functionality.

Antivirus	
Features Supported	Proxy Antivirus Flow-based Antivirus File Quarantine IPv6 Support
Performance	
Antivirus (Proxy-based)	50 Mbps
Antivirus (Flow-based)	190 Mbps

Intrusion Prevention

IPS technology provides protection against current and emerging network level threats. In addition to signature-based detection, we perform anomaly-based detection whereby our system alerts users to traffic that fits a profile matching attack behavior. This behavior is then analyzed by our threat research team to identify threats as they emerge and generate new signatures that will be incorporated into our FortiGuard services.

Intrusion Prevention System	
Features Supported	Automatic Attack Database Update Protocol Anomaly Support IPS and DoS Prevention Sensor Custom Signature Support IPv6 Support
Performance	
IPS Throughput	350 Mbps

VPN

Fortinet VPN technology provides secure communications between multiple networks and hosts, through both secure socket layer, or SSL, and IPsec VPN technologies, leveraging our custom FortiASIC to provide hardware acceleration for high-performance communications and data privacy. Benefits include the ability to enforce complete content inspection and multi-threat security as part of VPN communications, including antivirus, IPS and Web filtering. Additional features include traffic optimization providing prioritization for traffic across VPNs.

VPN	
Feature Highlights	IPSec and SSL VPN DES, 3DES, AES and SHA-1/MD5 Authentication PPTP, L2TP, VPN Client Pass Through SSL Single Sign-On Bookmarks Two-Factor Authentication
Performance	
IPSec VPN	140 Mbps
SSL VPN	70 Mbps
Recommend # of SSL Users	60

WAN Optimization

With WAN Optimization, you can accelerate applications over your wide area links while ensuring multi-threat security enforcement. FortiOS 4.0 software not only eliminates unnecessary and malicious traffic as one of its core capabilities, it also optimizes legitimate traffic by reducing the amount of communication and data transmitted between applications and servers across the WAN. This results in improved performance of applications and network services, as well as helping to avoid additional higher-bandwidth provisioning requirements.

WAN Optimization	
Features Highlight	Gateway-to-Gateway Optimization Bi-directional Gateway-to-client Optimization Web Caching Secure Tunnel Transparent Mode

End-Point NAC

Endpoint NAC enforces the use of the FortiClient Endpoint Security application (either Standard or Premium editions) on your network. It verifies the installation of the most recent version of the FortiClient application, up-to-date antivirus signatures, and enabled firewall before allowing the traffic from that endpoint to pass through the FortiGate platform. You also have the option to quarantine endpoints running applications that violate policies and require remediation.

Endpoint Network Access Control (NAC)	
Features Highlight	Monitor & Control Hosts Running FortiClient Vulnerability Scanning of Network Nodes Quarantine Portal Application Detection and Control Built-in Application Database

Web Filtering

Web filtering technology is a pro-active defense feature that identifies known locations of malware and blocks access to these malicious sources. In addition, the technology enables administrators to enforce policies based on website content categories ensuring users are not accessing content that is inappropriate for their work environment. The technology restricts access to denied categories based on the policy by comparing each Web address request to a Fortinet hosted database.

WEB Filtering	
Features Highlight	HTTP/HTTPS Filtering URL / Keyword / Phrase Block Blocks Java Applet, Cookies or Active X MIME Content Header Filtering IPv6 Support

SSL Inspection

SSL-Encrypted Traffic Inspection protects clients and web and application servers from malicious SSL-encrypted traffic, to which most security devices are often blind. SSL Inspection intercepts encrypted traffic and inspects it for threats, prior to routing it to its final destination. SSL Inspection applies to both client-oriented SSL traffic (such as users connecting to an SSL-encrypted hosted CRM site) and inbound traffic destined an organization's own web and application servers. You now have the ability to enforce appropriate use policies on inappropriate encrypted web content, and protect servers from

SSL Inspection	
Features Highlight	Protocol: HTTPS, SMTPS, POP3S, IMAPS Inspection support: Antivirus, Web Filtering, Antispam, Data Loss Prevention SSL Offload

Data Loss Prevention

It is imperative for you to control the vast amount of confidential, regulated, and proprietary data traversing your network, and keep it within defined network boundaries. Working across multiple applications (including those encrypting their communications), DLP uses a sophisticated pattern-matching engine to identify and then prevent the communication of sensitive information outside the network perimeter. In addition to protecting your organization's critical information, DLP also provides audit trails for data and files to aid in policy compliance. You can use the wide range of configurable actions to log, block, and archive data, as well as ban or quarantine users.

Data Loss Prevention (DLP)	
Features Highlight	Identification And Control Over Data in Motion Built-in Pattern Database RegEx Based Matching Engine Common File Format Inspection International Character Sets Supported

Logging & Monitoring

FortiGate units provide extensive logging capabilities for traffic, system and network protection functions. They also allow you to compile reports from the detailed log information gathered. Reports provide historical and current analysis of network activity to help identify security issues that will reduce and prevent network misuse and abuse.

Logging and Monitoring	
Features Highlight	Internal Log storage and Report Generation Graphical Real-Time and Historical Monitoring Graphical Report Scheduling Support Optional FortiAnalyzer Logging (including per VDOM) Optional FortiGuard Analysis and Management Service

Virtual Domain

Virtual Domain (VDM) enables a single FortiGate system to function as multiple independent virtual FortiGate systems. Each VDM contains its own virtual interfaces, security profiles, routing table, administration and many other features. FortiGate VDMs reduce the complexity of your physical network by virtualizing different security resources over a common platform, greatly reducing the power and footprint required by multiple point solutions.

Virtual Domains	
Features Highlight	Separate Firewall / Routing Domains Separate Administrative Domains Separate VLAN Interfaces
VDMs (Max / Default)	10 / 10

High Availability

High Availability (HA) configuration enhances reliability and increases performance by clustering multiple FortiGate appliances into a single entity. FortiGate High Availability supports Active-Active and Active-Passive options to provide the maximum flexibility for utilizing each member within the HA cluster. The HA feature is included as part of the FortiOS operation system so end-users can benefit from the reliability enhancement without the extra cost.

High Availability (HA)	
Features Highlight	Active-Active and Active-Passive Stateful Failover (FW and VPN) Link State Monitor and Failover Device Failure Detection and Notification Server Load Balancing

Application Control

Application control enables you to define and enforce policies for thousands of applications running on your endpoints, regardless of the port or the protocol used for communication. Application classification and control is essential to manage the explosion of new web-based applications bombarding networks today, as most application traffic looks like normal web traffic to traditional firewalls. Fortinet's application control technology identifies application traffic and then applies security policies easily defined by the administrator. The end result is more flexible and granular policy control, with deeper visibility into your network traffic.

Application Control	
Features Highlight	Identify and Control Over 1800 Applications Traffic Shaping (Per Application) Control Popular IM/P2P Apps Regardless of Port / Protocol Popular Applications include: AOL-IM Yahoo MSN KaZaa ICQ Gnutella BitTorrent MySpace WinNY Skype eDonkey Facebook and more

Wireless Controller

Wireless controller integrated into every FortiGate platform centralizes the management and monitoring of all FortiAP units. All wireless traffic is directed to the FortiGate multi-threat security platform and undergoes identity-aware firewall policies and UTM engine inspection. Only authorized wireless traffic is forwarded. From a single console you can control network access, update policies quickly and easily, and monitor compliance.

Wireless Controller	
Features Highlight	Managed and Monitor FortiAP product Rogue AP Detection, Control and Reporting Virtual AP with different SSID

Technical Specifications	FortiGate-80C	FortiGate-80CM	FortiWiFi-80CM
Hardware Specifications			
10/100/1000 WAN Interfaces (Copper, RJ-45)	2	2	2
10/100 Internal Switch Interfaces (Copper, RJ-45)	6	6	6
