FortiVoice-VM™

Virtual phone system

FortiVoice-VM is a virtual IP-PBX that delivers all the features of FortiVoice 200-series systems without the hardware. It's the most economical way to get FortiVoice if you're already running your own VM servers. And if you're a service provider who wants to add hosted solutions to your offerings, FortiVoice-VM is perfect for you. With simple licensing, unprecedented pricing and instant deployment, FortiVoice-VM is better than hardware. Supports up to 300 IP extensions with up to 50 concurrent VoIP calls.

FortiVoice-VM gives you total call control and sophisticated communication features for excellent customer service and efficient employee collaboration. Simple, flexible and affordable, FortiVoice-VM includes everything you need to handle calls professionally, control communication costs and stay connected everywhere.

Built-in fundamentals

FortiVoice-VM systems include all the fundamentals of enterprise-class voice communications. Auto attendants, voice messaging, ring groups, conferencing and much more are built-in, and the licensing is simple; 50 extensions come with the base license, and you can add up to 250 more in blocks of 25.

User appeal

Your people will like it too. The FortiVoice personal web portal lets your staff view their call logs, configure and manage their own messaging and access other features. Your employees get control over their phones, and your IT staff gets a break from having to configure every little change

Key Features & Benefits

Multilocation networking	Integrates multiple locations, around the block or across the country with no long-distance charges.
Rich call features	Line/extension appearance, call queue, call barge, phone profile, ring group, call recording, rule-based dial plan, individual/group voicemail, and much more.
Flexibility	Multiple mode scheduling, flexible number management, re-assignable extensions, and caller ID modification.
Ease of configuration	Visual auto attendant config, built-in DHCP server, auto phone provisioning and web-based management and user web portal.
Comprehensive system monitoring	Real-time call status monitoring, call statistics, call logs, and call reports, and network traffic capture.
